Capita SIMS offers marking on the move

Capita SIMS is offering a new app that allows teachers using a tablet to award marks for students' work on the go, whether they are in the classroom, in the hall or out on the sports field. The teacher enters their login details and the SIMS Teacher app intuitively knows the time, date and which lesson they are taking. It also shows the name and pictures of all students in a particular class. If a teacher is on a field trip, it is possible to record attendance and assessment details for individual students that can be synchronised with the school's SIMS management information system on return to school.

Phil Neal, managing director of Capita SIMS, says: "Teachers have repeatedly told us they want to be able to enter information as students work. Many feel entering assessment marks at the end of the day leaves the whole process feeling disjointed. With our app, all the information is instantly uploaded to a school's SIMS MIS, so the school always has the most up-to-date information when it is needed."

5-a-day Fitness plans live demos and competitions

Dancers from 5-a-day Fitness will be giving live demonstrations, signing autographs and giving away goodie bags to the best dancers in dance off competitions on the company's stand at Bett 2015. The company is also holding a Tweet-2-Win competition and will be giving away a full years subscription to 5-a-day Fitness to one lucky tweeter.

5-a-day is an online fitness resource for primary schools. Its videos are designed to improve fitness, boost concentration levels and support language learning in primary schools. All videos feature foreign language voiceovers with onscreen translations and are designed specifically for projection onto classroom whiteboards. There is no teacher preparation required and pupils simply have fun, get fit and learn languages.

MUV introduces bird interaction technology

MUV Interactive, a developer of intuitive interaction technology solutions that enable displayed content to be used anywhere in a room, is showcasing its flagship product, bird, at Bett 2015. The product allows educators to interact with their students from anywhere in the classroom, while simultaneously controlling courseware content that can be projected on any surface.

bird is an easy-to-use, state-of-the-art device worn on the teacher's index finger, facilitating continuous interaction with projected digital content from any location in the classroom. Teachers can choose from a variety of interaction methods, including touch, remote-touch, depth sensing, hover, gestures, mouse functionality or a red laser pointer.

LapSafe introduces Diplomat PIN lockers

LapSafe Products will add to its range of charging lockers at Bett 2015 with Diplomat PIN lockers that support the charging of user devices including laptops, netbooks, Chromebooks and tablets. The company has teamed up with BeCode to provide the locker range with a smart keypad lock named miniPad, which offers a keyless and cable-free environment. The locks are secure, simple to operate, unaffected by power outages and do not require connection to an IT infrastructure.

miniPad is designed for lockers operated by single dedicated users, or for areas where multiple users can use the same locker. Combining miniPad with TANmode management software allows administrators to automatically generate user codes and transmit them via email or text message to end users. LapSafe SmartLine charging means all devices are charged simultaneously, with charge levels indicated by a single LED adjacent to the locker. The Diplomat PIN lockers consist of 12-bay locker towers, robust steel construction and the doors are fitted with continuous hinges for added security. Find out more on stand F186

Fuze offers training and a prize draw

Fuze Technologies is holding a series of on-stand training events at Bett 2015 to help students and teachers learn computer programming. In support of the new national curriculum for Computing, visitors to the stand will be given the opportunity to take part in live coding workshops using the Fuze, a computing platform specifically designed to help make teaching text-based programming as easy and accessible as possible. They will also be able to take part in a prize draw for a Fuze Special Edition Model with Robot Arm worth £269.99.

The Fuze is equipped with the easy-to-learn programming language Fuze Basic, as well as Scratch and Python. It can be used at all levels of ability and can help students make the transition from using simple to more advanced languages without feeling out of their depth. The Robot Arm, which works alongside the Fuze, is the latest product to be added ahead of Bett 2015. It has five motors that can be controlled separately to move the arm in clockwise and anti-clockwise directions, and it can pick up items with a gripper
